quartz surfacing

Geoquartz quartz surfacing offers expanded opportunities for creativity and design freedom, limiting designers and architects only to their imaginations.

Quartz is extremely hard with unmatched strength, radiance, clarity, and depth. Quartz has a MOHS hardness rating of 7. It is one the most varied of minerals, offering numerous types, colors, and forms. Because of this, it is the main material used to create geoquartz slabs and tiles.

Geoquartz offers superior durability and strength. It is dense, nonporous, and scratch and stain resistant. It is extremely resistant to cracks, chips, dulling, and abrasion. It requires minimal maintenance and generally does not require sealing or polishing. It can be cut and installed to a customer's precise requirements.

All of this makes Geoquartz an ideal surfacing material for your commercial, infrastructure, retailing, educational, or residential project. It also offers creativity with a low environmental impact as many of our styles make extensive use of post-consumer recycled material including glass and mirror chips.

Please call for our current Color Selection Guide. Visit geoquartz.com for specifications, sizes, and technical data, as well as availability, installation, and usage information.

2300 Norman Drive South | Waukegan, Illinois 60085

Geoquartz is warranted by our Geoquartz Limited Warranty, copies of which are available from our website. Before using, user shall determine the suitability of the product for its intended use, and user assumes all risk and liability whatsoever in connection therewith. Product specifications, sizes, and colors are subject to change without notice. Printed representations of the product may vary from actual samples and production pieces. Geoquartz is composed of natural quartz materials and as such is subject to slight variations in color, shading, and particle structure.
